

Assignment-2

3) Reverse Linked List

206. Reverse Linked List

Given the `head` of a singly linked list, reverse the list, and return the reversed list.

Example 1:

Input: `head = [1,2,3,4,5]`
Output: `[5,4,3,2,1]`

Example 2:

Input: `head = [1,2]`
Output: `[2,1]`

```
class Solution {
    public ListNode reverseList(ListNode head) {
        ListNode temp = head;
        ListNode back = null;
        while(temp != null){
            ListNode front = temp.next;
            temp.next = back;
            back = temp;
            temp = front;
        }
        return back;
    }
}
```

4) Reverse Linked List – 2

92. Reverse Linked List II

Given the `head` of a singly linked list and two integers `left` and `right` where `left <= right`, reverse the nodes of the list from position `left` to position `right`, and return the reversed list.

Example 1:

Input: `head = [1,2,3,4,5]`, `left = 2`, `right = 4`
Output: `[1,4,3,2,5]`

Example 2:

Input: `head = [5]`, `left = 1`, `right = 1`
Output: `[5]`

```
public ListNode reverseBetween(ListNode head, int left, int right) {
    if (left == right) return head;
    ListNode temp = head;
    ListNode back = null;
    ListNode stop = back.next;
    while (temp != stop) {
        ListNode front = temp.next;
        temp.next = back;
        back = temp;
        temp = front;
    }
    return back;
}
```
